02 Magnetic Properties and Principles of Magformers

Attracts and sticks

Repels and won't stick

As shown above, Magformers magnets rotate and stick to opposite poles. They can be attached to any side of a piece from any direction.

However, as shown above, if two pieces are stuck together and the magnets cannot rotate, they might repel each other in some cases. That's why it's easier to attach one piece to another. Likewise, when you clean up the Magformers pieces, it's easier to attach one piece to another!

03 Magformers Product Lines

• The monster accessories are not compatible with XL Cruisers (△, □) pieces.
